

Instructions for Mustang 2015-2017 Headlight Modified Type

This headlight can be installed in both European and American models of Ford Mustang. If it is an US version of the car, please ignore the white and yellow lines behind the headlights and directly connect the black plug to the car.

The EU version of the car does not have lights in this area on the right, so if you want it to be the same as before, you can directly plug to the car; If you want the lights in this area to light up, you need to connect the yellow and white lines behind the headlights to the daytime running lights of the car.

Please refer to the following text for the wiring steps:

Daytime running light of the car has two connectors, one black (1) and one yellow (2). Break the wires at these two connectors and connect them to the white wire provided with our

Cut the white line into two wires which are approximately 20 centimeter segments, then use these two lines to connect the wires (1&2) of the back of the headlights with the daytime running light function of the car.

After connecting the two wires behind the headlights to the daytime running light function of the car, you can connect the plug behind the headlights to the car. This will enable the illumination of that area.
